

# 1

# STOP

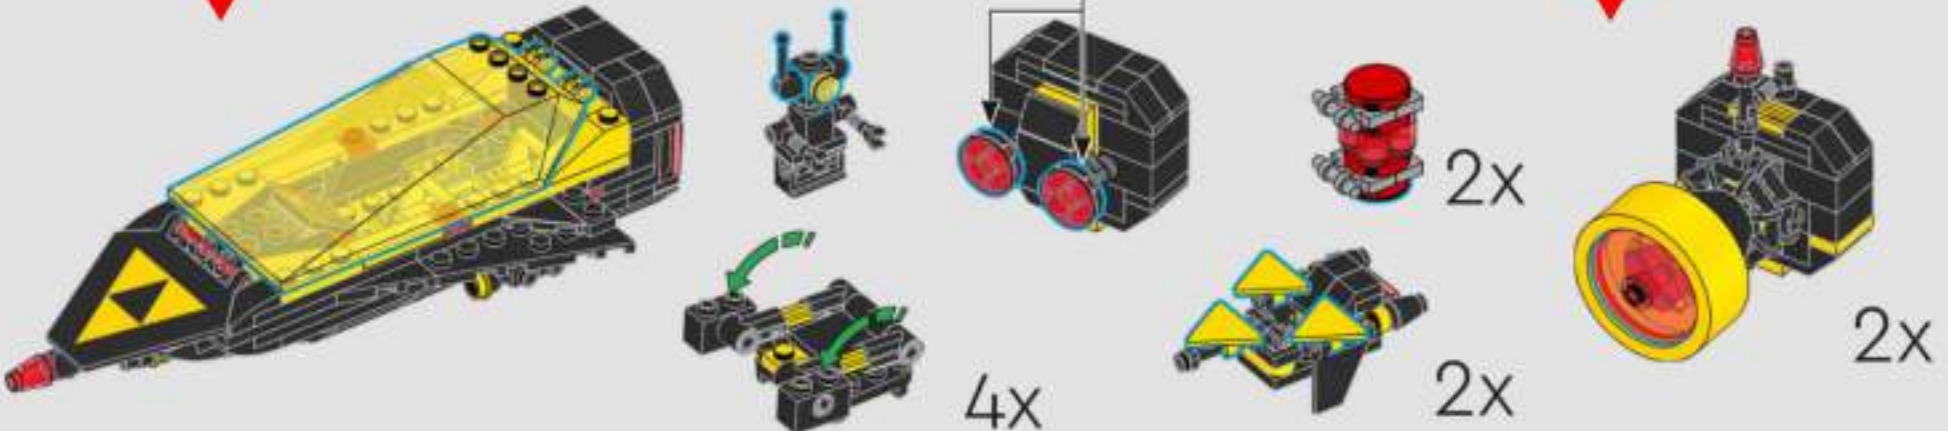

# Have you built 10355: Blacktron Renegade yet?

Yes

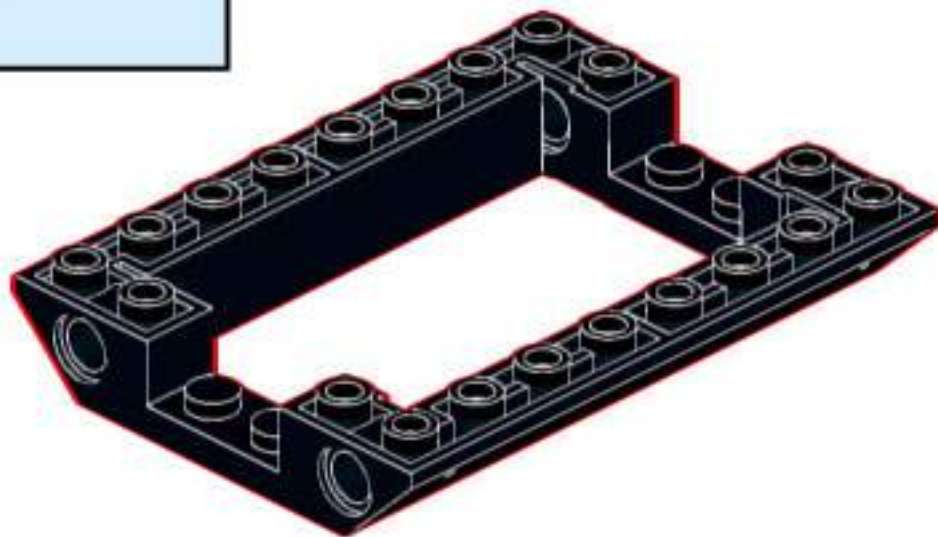

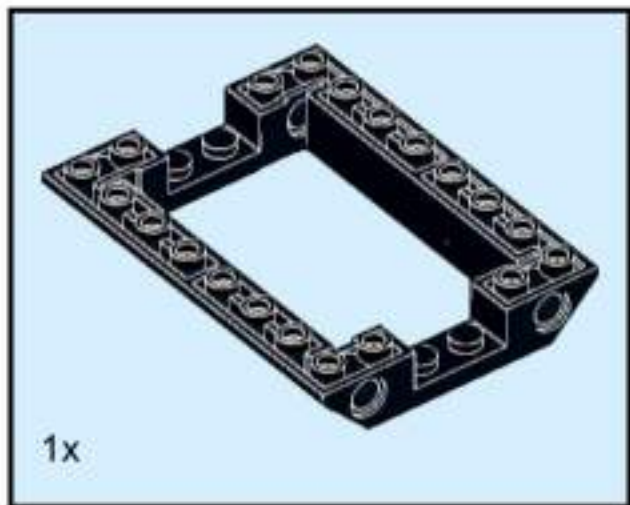

You do not need to completely disassemble the set. The following subassemblies can be kept intact. The rest can be taken apart to build the Y-wing.

No

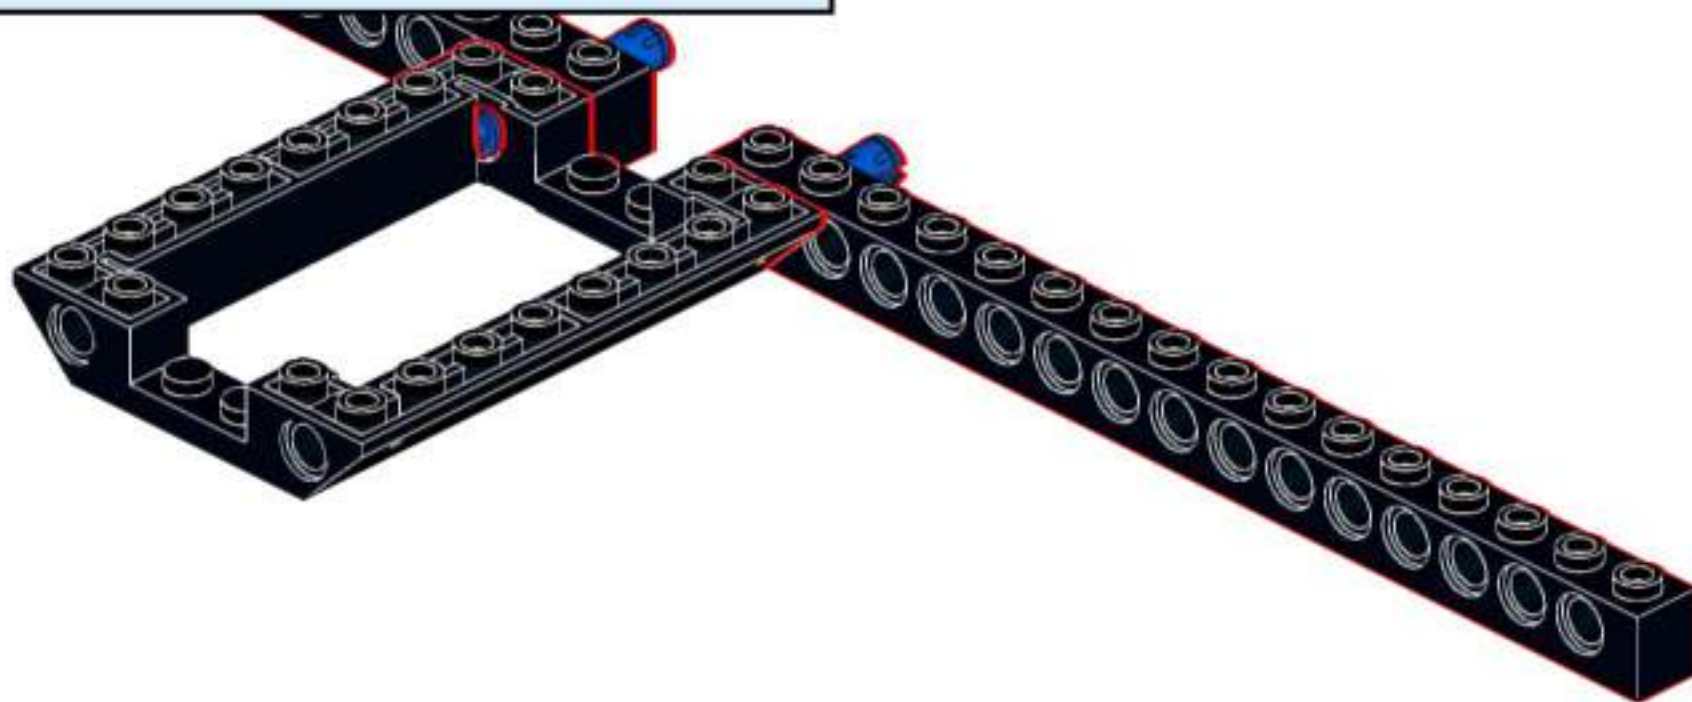

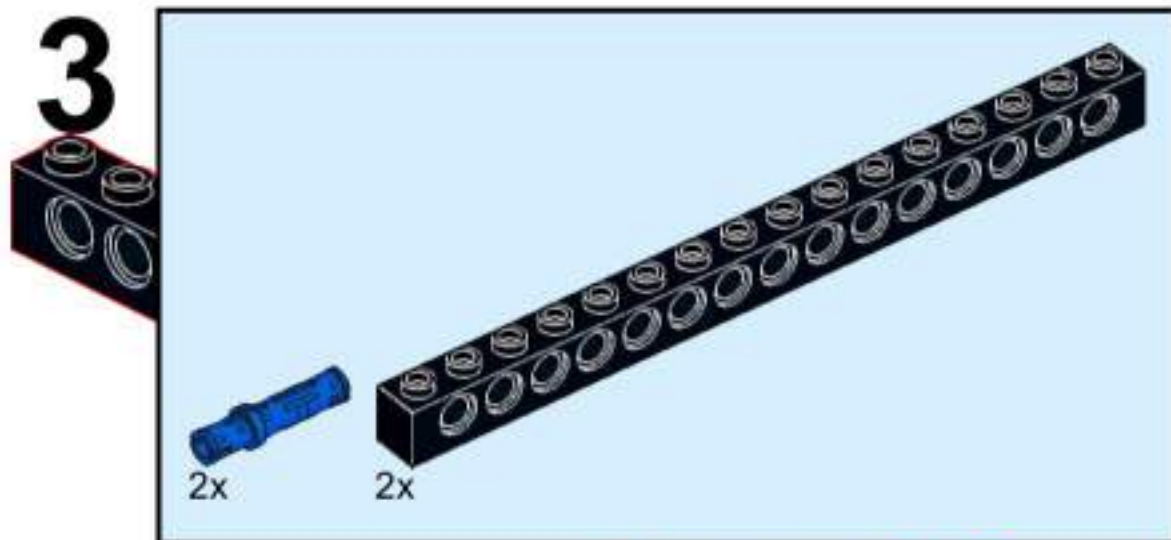

Using the official instructions from LEGO (also available online), you need to build the following subassemblies / modules. These will slot into the new Y-wing.

These are the printed pieces which are not available in the instructions software right now. Place them here so your 'droid' has its own controls. Use one of each here.

The Fuel Cells need to be inserted so that the two flat parts are touching. Connect them to the black clips using the middle section of the bar.

# 186

Your robot has a place right behind the cockpit, just like the actual Y-wing. Connect the robot's right open stud to the jumper plate.
